TASKS FOR TODAY MANAGEMENT SYSTEM IN LARAVEL

Student Name / Group Name:	Aldrich S. Sy
Members (if Group):	**Name** / **Role** (/) (/) (/) (/)
Section:	TC33
Professor:	Von Erick Magbitang

PROGRAM OUTCOME/S (PO) ADDRESSED BY THE LABORATORY EXERCISE

- Design, implement and evaluate computer-based systems or applications to meet desired needs and requirements. [PO: C]

COURSE LEARNING OUTCOME/S (CLO) ADDRESSED BY THE LABORATORY EXERCISE

- Apply advanced web development principles in creating, debugging, validating, and securing database-backed web applications. [CLO: 2]
- Design program flow and application structure for computing problems using CodeIgniter and Laravel frameworks. [CLO: 3]

INTENDED LEARNING OUTCOME/S (ILO) OF THE LABORATORY EXERCISE

At the end of this exercise, students must be able to:

- Design a Laravel migration schema for a small task-management application.
- Build Eloquent models and controllers that retrieve and filter records, including filtering by date.
- Produce multiple distinct Blade views from a shared Eloquent data layer.

BACKGROUND INFORMATION

This assessment replicates TSA1 in Laravel: the same Tasks for Today Management System, rebuilt with migrations, a seeder, and Eloquent instead of raw SQL and Query Builder. The requirements and the underlying data are identical to TSA1 — only the implementation changes.

GRADING SYSTEM / RUBRIC

CRITERIA	Description
Functionality & Requirements Completeness (35 points max)	All required pages, records, and workflows are present and behave as specified in the activity instructions.
Code Structure & Organization (20 points max)	The application follows the framework's MVC conventions with a clear, consistent separation of concerns across controllers, models, and views.
Database Design & Data Retrieval (25 points max)	Migrations correctly create the specified schema, seeded data is realistic and sufficient, and Eloquent queries correctly filter by date where required and retrieve all records where required.

CRITERIA	Description
Documentation & Submission Quality (20 points max)	The GitHub repository is organized and complete, the README explains how to set up and run the project, and the hosted link is live and matches the submitted code.

LABORATORY ACTIVITY

Rebuild the Tasks for Today Management System from TSA1 in Laravel: a Welcome page showing only today's tasks, a full Task List page, a Profile page, and an About page.

1. Create migrations for a tasks table (title, status default 'pending', task_date, timestamps) and a users table (username unique, full_name, email), matching TSA1's schema.
2. Create a seeder that populates at least 8 tasks spanning at least 3 different dates, including today's date, and exactly one user record.
3. Create Task and User Eloquent models.
4. Build the Welcome page (/) to query and display only tasks where task_date is today.
5. Build the Task List page (/tasks) to display every task, ordered by date.
6. Build the Profile page (/profile) to display the single user record.
7. Build a static About page (/about) identifying you as the developer.

Submission Requirements:

- A link to a GitHub repository containing your raw project files, including your database export or migration and seeder files.
- A link to your hosted, working version of the application.
